technology for sustainable development

GIS & Mapping

Geospatial technologies to discover patterns and gain insights. Through the power of GIS we are able to build a better understanding of the ongoing processes and provide organizations with the right tools to manage, correlate, predict and share information. We have developed a deep expertise in Geographic Information System design and implementation.

Data Driven Decisions

The future is all about unlocking the potential of data. Our solutions ease field data collection making operations faster, cheaper and more reliable. With geospatial technology, we can provide quick monitoring and powerful visualization of collected data in order to support decision making with comprehensive information.

Dissemination

Better communication for better understanding. The digital storytelling we provide combines the communicative power of maps with multimedia and textual elements with the aim of driving results to the largest possible audience. The key of our solutions is the transformation of information into visual representations.

Consultancy & Custom Solutions

We grow together with our partners by supporting them in all phases of a project, from the choice of the most appropriate tools to technical assistance. We provide both training and on-the-job training on the digital innovation, dev framework, GIS process, Esri products; in addition, our multidisciplinary approach allows us to develop custom solutions for each specific needs.

Solutions.

making your data actionable

GIS for **National Statistics**

With the power of GIS we strengthen statistical systems and Census operations by integrating location-based digital tools, improving the accuracy of data collection, analysis and dissemination.

GIS for **International Cooperation**

We optimize limited resources in development contexts by leveraging spatial data for decision-making, monitoring changes, and evaluating impact while engaging local communities and donors.

GIS for **Conservation**

Reveal hidden insights by layering multiple data sources on maps. Aerial photos highlight land cover changes, real time communication and tracking data expose poachers' activities. Geointelligence aids asset protection and understanding human-environment interactions.

Innovating the Comoé National Park Management, Ivory Coast

gisAction is supporting the conservation efforts of Comoé National Park by providing an efficient surveillance system and equipping the park management and rangers with geoenabled and effective tools for security and data-driven planning.

Albanian Census

The Albanian Institute of Statistics has introduced GIS technology in the Census of population and housing. gisAction worked on the project by building the digital infrastructure for data collection, analysis and dissemination, and innovating the entire workflow with the geographical approach.

Digital and geographic M&E in Chamanculo C (Mozambique)

gisAction supports AVSI Foundation in Mozambique by building a Monitoring Information Systems: a web GIS platform to digitize the M&E framework and to enhance participatory action mechanisms for a multi-stakeholders urban regeneration process.
